Press Release, 01.10.2022

ISTA Seed Symposium 2022

Seed quality, health and identity are of paramount importance for the global economy and the environment and key for global food security. Therefore, the International Seed Testing Association (ISTA) is holding this year's seed symposium under the theme 'Quality Seed for Sustainable Agriculture' in Athens, Greece from 02-04 November.

To discuss most aspects of seed quality, the symposium brings together seed analysts, technologists, researchers, and managers from universities, research institutes, the government, and the seed trade. It provides a forum for discussion of the latest advances in seed science and technology, as well as an opportunity to exchange ideas and information

The 5 symposium sessions will each have a notable lead speaker, and are composed of presentations, poster sessions, and discussions - all presenting unique networking opportunities among others.
