Preface to the 2014 Edition of the ISTA Rules

From 1 January 2014, the *International Rules for Seed Testing* (ISTA Rules) will be primarily available in electronic form only. The ISTA Rules can be downloaded as a complete PDF file or as individual chapters from:

http://www.ingentaconnect.com/content/ista/rules

If required, users of the ISTA Rules can print their own copies.

For further information on the ISTA Rules, see:

http://www.seedtest.org/rules

Seed health testing methods

Previously, the seed health testing methods were published as a separate Annexe to Chapter 7 of the ISTA Rules. They are now available as separate method sheets from the ISTA web site at:

http://www.seedtest.org/seedhealthmethods

Details of changes

The 2013 changes are editorial corrections or Rules changes adopted at the Ordinary General Meeting held at Antalya, Turkey, in June 2013.

The changes in the text content from the previous edition of the ISTA Rules can be displayed as yellow highlighted text as a ‘layer’ within the electronic copy with comments on what has changed.

For the previous history of amendments to the ISTA Rules see the Prefaces for 2003 to 2012 on the ISTA web site.

Dr Steve Jones, ISTA Rules Committee Chair
Craig McGill, ISTA Rules Committee Vice-Chair
ISTA Secretariat
**Introduction to the ISTA Rules**

### I-1 General information

The International Seed Testing Association (ISTA) was established in 1924 to work towards a vision of uniformity in seed testing internationally. ISTA's current mission is to develop, adapt and publish standard procedures for sampling and testing seeds, and to promote uniform application of these procedures for evaluation of seeds moving in international trade. The need for seed testing methods that are reliable and reproducible among its accredited member laboratories is therefore a basic need for ISTA. This is achieved through the publication of the International Rules for Seed Testing (hereafter ‘ISTA Rules’). The primary aim of the ISTA Rules is to provide testing methods for seeds designated for growing of crops or production of plants. In addition, most of the testing methods can also be applied for evaluation of the quality of seeds used as food or for technical purposes.

ISTA’s seed sampling and testing methods have been developed by its members since its formation in 1924. Methods have gone through appropriate validation studies to ensure that test procedures give reliable and reproducible results. Following agreement between ISTA’s member countries, the validated methods have been included in the ISTA Rules.

Seed quality testing therefore requires test methods and equipment that have been tested to ensure they are fit for purpose, i.e. validated. The ISTA Method Validation Programme (see Section I-2) provides the mechanism for the inclusion of test methods in the ISTA Rules.

Seed is a living biological product, and its behaviour cannot be predicted with the certainty that characterizes the testing of inert or non-biological material. The test methods used must be based on scientific knowledge and the accumulated experience of those working in seed testing and quality control. This expertise is provided largely by the members of ISTA’s Technical Committees.

The ISTA Rules contain 19 chapters, 17 of which provide internationally accepted test methods for various attributes of seed quality. Chapter 2 (Sampling) provides the required methods for sampling of seed lots, because for ISTA, a direct connection between the seed lot from which the sample was drawn and the results of quality tests conducted on that seed lot must always be evident. The ‘end product’ for an accredited ISTA laboratory following quality tests on a seed lot is an ISTA Certificate. Information on how to use ISTA Certificates is presented in Chapter 1.

Each of the 17 chapters on test methods includes sections on the Object (of the test), Definitions (of terms used in the chapter), General Principles (for the test), Apparatus (required for the test), Procedure (how to conduct the test), Calculation and Expression of Results (specific to each test), Reporting Results (how to report results correctly on an ISTA Certificate), and Tolerances (statistical tables for use in determining whether test results are acceptable or not acceptable). Note that where, to provide adequate guidance, it has been necessary in the Apparatus section to refer to a particular manufacturer’s piece of equipment, this should not be construed that ISTA endorses that piece of equipment in preference to, or to the exclusion of, equivalent products from other manufacturers.

The ISTA Rules are designed for the principal crop species of the world. Species are broadly classified as agricultural and vegetable, tree and shrub, and flower, spice, herb and medicinal. ISTA encourages proposals for the addition of new species to the ISTA Rules.

ISTA Certificates can only be issued by ISTA accredited laboratories. For seed quality test results to be reported on an ISTA Certificate, it is mandatory that all the requirements of the ISTA Rules are strictly followed.

ISTA also recommends that the ISTA Rules be used by all seed testing laboratories (including non-ISTA member laboratories) when testing seed for trade transactions which do not require the use of an ISTA Certificate (e.g. within a country), and for the enforcement of national laws for the control of seed quality.

I-2 Guidelines for ISTA Rules proposals

Proposals to amend the ISTA Rules or to introduce new species are welcomed from any source. ISTA operates an open system, and proposals are not restricted to ISTA members only. Any proposal needs to have been submitted to the ISTA Secretariat at least six months before the ISTA Ordinary Meeting.

Following receipt, the ISTA Secretariat may send the proposal to the relevant ISTA Technical Committee or directly to the ISTA Rules Committee, which will review all the proposals received. The ISTA Executive Committee will then either approve a proposal for consideration by the ISTA membership or request further work on the proposal. All approved Rules proposals are then sent to the ISTA membership two months before the Ordinary Meeting. At the Ordinary Meeting, the ISTA voting delegates may vote to accept a proposal (which will then be implemented in the ISTA Rules, effective 1 January of the following year), to withdraw a proposal (for further consideration), or to reject a proposal.

I-2.1 Proposals concerning test methods

All seed quality test methods proposed for inclusion in the ISTA Rules must have gone through the ISTA Method Validation Programme. This is required for both new test methods (i.e. not currently in the ISTA Rules) and modifications to existing methods already included in the ISTA Rules. A four-step process is involved:
1) method selection and development;
2) validation through comparative testing;
3) review of comparative test results and preparation of a Method Validation Report;
4) approval of validation status by the relevant ISTA Technical Committee and preparation of an ISTA Rules proposal for the method.

Final acceptance of the proposal by vote of the ISTA membership at an Ordinary Meeting will allow publication of the validated method in the ISTA Rules.

Further information on the ISTA Method Validation Programme can be obtained from the ISTA Secretariat.

I-2.2 Proposals for new species

For a proposal to introduce a new species, Form 1 on pages 5–9 may be used.

The following information must be supplied by the applicant:

1. Names of species. The scientific name (including author) plus common names and synonyms must be given. The common names will be used by the ISTA Nomenclature Committee to update the Multilingual Glossary of Common Plant Names. The ISTA Nomenclature Committee will stabilize the scientific name for at least six years so that laws and trade agreements do not have to be altered frequently. For assistance in determining the correct scientific name and its author, the ISTA Nomenclature Committee may be contacted.

2. Maximum lot size and sample sizes. Proposals for maximum lot size should take into account the general principles that have been applied to species already in the ISTA Rules and to the feasibility of achieving reasonably homogenous seed lots. Seed size is generally the significant factor in determining maximum lot size, but this is also influenced by whether the species is for agriculture or horticulture use, a tree or shrub species, or a flower, spice, herb or medicinal species. This, in turn, will determine whether the species should be placed in Part 1, 2 or 3, respectively, of Table 2A. Proposals for maximum lot size and submitted sample size should then be based on those already to be found in the corresponding part of Table 2A. For agricultural and horticultural species, the submitted sample is larger in relation to the purity working sample, based on the weight of 2500 seeds, than for the other species, to allow for determination of other species by number based on 10 times the purity weight.

3. Pure Seed Definition. The ISTA Rules and the Handbook of Pure Seed Definitions already list many pure seed definitions. The appropriate one should be given. If none of them apply, a proposal for a new definition should be submitted.
4. **Validated germination test methods.** The methods proposed must have been validated, either by multi-laboratory collaborative testing or peer validation (see ISTA Method Validation Programme). Advice as to requirements can be obtained from the ISTA Germination Committee. Please specify the data as required for insertion in Table 5A.

5. **Validated tetrazolium test procedures.** Procedures for tetrazolium testing should be given if known. A proposal to amend Chapter 6 may be submitted following the appropriate method validation.

6. **Validated moisture content determination methods.** A validated method for moisture determination must be provided if the method is different to the reference (i.e. low-constant-temperature) method.

7. **Thousand-seed weight**

8. **VARIETAL IDENTIFICATION.** Using current techniques, it is possible to verify a descriptor to check varietal purity in some species. Please indicate validated techniques.

9. **Seed health tests.** The methods proposed must have been validated, either by multi-laboratory collaborative testing or peer validation (see ISTA Method Validation Programme). Advice as to requirements can be obtained from the ISTA Seed Health Committee.

### I-2.3 Other proposals

Within a chapter of the ISTA Rules, a change to the existing text (e.g. amendment of a definition) or introduction of new text (e.g. introduction of a new definition) may be proposed. Providing the proposal does not directly involve a test method or new species, it should be sent directly to the ISTA Secretariat.

**Thousand-seed weight of small-seeded varieties of Poa pratensis**

Before a small-seeded variety can be included in Table 3A, a determination of the thousand-seed weight must be performed on at least 20 samples from different seed lots, representing seeds grown either in two different harvest years or in two different countries.

The determination of the thousand-seed weight shall be carried out on pure seeds, obtained by blowing a 1 g sample of *Poa pratensis* using the standard blower setting (factor 1.00). Only seed remaining in the heavy fraction shall be used for the thousand-seed weight. See Chapter 10 of the ISTA Rules for the weight determination procedure.

Results should be submitted to the ISTA Purity Committee with a request to change the ISTA Rules.
Form 1: Proposal for inclusion of new species in the ISTA Rules

Note: this form is also available on the ISTA web site (www.seedtest.org)

1. Scientific name of proposed species

<table>
<thead>
<tr>
<th>Family</th>
<th>Genus</th>
<th>Species</th>
<th>(Nominated Authority)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Genus and species names appear in List of Stabilized Plant Names: Yes/No
Known synonyms: _______________________________________________________
Common plant name: ________________________ in __________________________ (Member country)
(required for Multilingual Glossary)

2. Lot and sample weights

(Information as it should appear in Table 2A)

<table>
<thead>
<tr>
<th>Species</th>
<th>Maximum weight of lot (kg)</th>
<th>Minimum submitted sample (g)</th>
<th>Minimum working samples (g)</th>
<th>Purity analysis (3.5.1)</th>
<th>Count of other species (4.5.1)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3. Pure Seed Definition

(Table 3B Part 1)
The following Pure Seed Definition (PSD) covers the proposed species:

<table>
<thead>
<tr>
<th>Genus</th>
<th>Family</th>
<th>PSD number</th>
<th>Chaffiness</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

No existing definition covers this species:

Distinguishing characteristics of this species:

(List distinguishing characteristics. Attach drawings, if available, and be prepared to send to the Secretariat five seed samples from well-processed, as well as from incompletely cleaned, seed.)
4. Validated germination test method(s)

(Information as it should appear in Table 5A)

<table>
<thead>
<tr>
<th>Species</th>
<th>Prescriptions for:</th>
<th>Additional directions incl. recommendations</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Substrate Temperature (°C)</td>
<td>Final count (d)</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

5. Validated tetrazolium test procedure

(Information as it should appear in Table 6A)

<table>
<thead>
<tr>
<th>Species</th>
<th>Pretreatment: type/minimum time (h)</th>
<th>Preparation before staining</th>
<th>Staining solution (%)</th>
<th>Optimum staining time (h)</th>
<th>Preparation for evaluation</th>
<th>Permitted non-viable tissue</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(If no existing drawings apply, attach if available)

6. Validated moisture test methods

Specify appropriate methods or details for inclusion in Table 9A Part 1 or 2:

<table>
<thead>
<tr>
<th>Species</th>
<th>Grinding/cutting (9.1.5.4, 9.1.5.5)</th>
<th>High temperature</th>
<th>Drying at high temperature (h)</th>
<th>Predrying requirement (9.1.5.6)</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(Part 1)</td>
<td></td>
<td></td>
<td></td>
<td>(Not applicable)</td>
</tr>
<tr>
<td></td>
<td>(Part 2)</td>
<td></td>
<td></td>
<td></td>
<td>(Not applicable)</td>
</tr>
<tr>
<td></td>
<td>(Part 3)</td>
<td></td>
<td></td>
<td></td>
<td>(Not applicable)</td>
</tr>
</tbody>
</table>
7. Thousand-seed weight = __________ g

8. Validated varietal identification method (attach separate sheet, if necessary)
_____________________________________________________________________

Supporting evidence for proposal

9. Number of national seed analysis certificates issued per year:

_________

10. Other countries or laboratories testing the proposed species:
